GRADE

Exam1 [40%] + Exam2 [60%]

*** No make-up tests or exams will be given. ***

COURSE DESCRIPTION

The origins of modern game theory and its application to economics can be traced back to the 1830's, when the mathematician Antoine Augustin Cournot wrote his now famous model of duopoly, but for a century its development was fitful and slow. After the appearance of John von Neumann and Oskar Morgenstern's 'Theory of Games and Economic Behavior' in 1944, interest and research in the subject underwent a phase of rapid and extensive growth. It is now regarded by economists and social scientists as a central theory of human strategic interaction, and in recent years it has even entered the conversations of an educated public.

In this master's level course, we will study the logical and analytic underpinnings of game theory, as well as its economic applications. From the rigorous formulation of models of interaction and the concept of strategies, we will move on to the positive and normative assertions of game theory – Nash Equilibrium, Iterated Deletion of Dominated Strategies, Rationalizability, Sub-game Perfection, Evolutionary Stability etc., and examine assumptions about human decision and social institutions that may support these assertions. Many of these ideas have been motivated by economic phenomena, which still provide the best illustrations of game theory as well as inspirations for game theorists.

It is also well known that game theory frequently makes predictions which appear to be at odds with observed human behavior, whether seen in natural settings or deliberate experiments. We will discuss some of these findings, and may occasionally engage in experimentation ourselves. However, even when we feel that game theory fails to deliver empirically sound predictions or prescriptions, a useful way to understand why it may be so is to scrutinize its assumptions and logic as closely and deeply as we can.

The student is assumed to come equipped with basic knowledge of economic theory and mathematics (including some calculus and probability theory), but most important of all is his/her ability and willingness to think clearly and logically.

COURSE SCHEDULE See attached.

Registered students should check the course website at <https://learn.bu.edu/> frequently for course material, announcements, updates on the schedule, and grades.

ACADEMIC CONDUCT

It is the student's responsibility to read, understand and observe the University's *Academic Conduct Code*. (For graduate students: <https://www.bu.edu/cas/files/2017/02/GRS-Academic-Conduct-Code-Final.pdf>; for undergraduates including BA/MAs: <https://www.bu.edu/academics/resources/academic-conduct-code/>). Cases of suspected misconduct will be referred to the appropriate University authorities. Furthermore, acts of plagiarism or cheating will be penalized with failing grades.

COURSE SCHEDULE Details of this schedule are subject to change. Registered students can log into the course website at <https://learn.bu.edu/>. You should visit this website frequently to get the latest course schedule, check announcements, obtain class material and verify your personal grading record.

- ◆ LECTURE and READING are complements rather than substitutes. To do well in this course, you must understand both thoroughly. Readings from the TEXT are given in this schedule. Additional reading will be assigned or suggested from time to time.
- ◆ HOMEWORK problems will be assigned from time to time in relation to the progress of the course. Although they will not be collected and graded, working through practice problems is essential for mastering the course material and preparing for the exams. SOLUTIONS to the exams and some homework problems will be posted on the course website, and we may devote some time in class to solving problems. But you will not benefit from the solutions until you have worked seriously on the problems.
- ◆ EXAM dates are given below. The two exams will test your comprehensive understanding of the course material up to the time of the exam.

DATE	LECTURE	READING
T9/04	Modeling Strategic Interactions	Chapter 1
	Extensive Form Games with Complete and Perfect Information	Chapters 5, 6, 7
T9/11	Backward Induction and the problems it raises Zermelo's Theorem and the Game of Chess Centipede Game & Chain Store Paradox Rubinstein Bargaining Model and Subgame Perfect Equilibrium	Chapter 16 Section 16.1 (Sec.16.2-4 are of related interest but not part of the course)
T9/18	Strategic (Normal) Form Games with Complete Information	Chapters 2, 3, 4
	Nash Equilibrium and the problems it raises Cournot & Bertrand Models of Oligopoly	
T9/25	Strategic Substitutes vs. Strategic Complements Iterated Deletion of Dominated Strategies Maximin and Rationalizable Strategies	Chapters 11, 12
T10/02	Mixed Strategy and Nash Equilibrium in Mixed Strategies Existence of Nash Equilibrium	
T10/09	<No Class Meeting: Substitute Monday Schedule>	
T10/16	Strategic (Normal) Form Games with Incomplete Information	Chapter 9
	Decision under Uncertainty and Statistical Inference	
T10/23	Bayesian Nash Equilibrium Correlated Equilibrium	
T10/30	Auctions, Price Discrimination & Contracts Review, Discussion or Experiment	
T11/06	EXAM 1: covers course material through 10/30	

EC513(A1)**FALL 2018**

DATE	LECTURE	READING
T11/13	Repeated Games Inter-temporal Preference and Decision Reward, Punishment and Cooperation Subgame Perfect Equilibrium Payoffs and Strategies	Chapters 14, 15
T11/20	Social Norms Third-Party Sanction Subgame Perfect Equilibrium and Recursive Strategies <Thanksgiving Recess>	
T11/27	Evolution of Behavior and Belief Population Dynamics and Evolutionary Stability	Chapter 13
T12/04	Extensive Form Games with Imperfect or Incomplete Information Sequential Rationality and Inference about the Past Imperfect Recall	Chapter 10
T12/11	Perfect Bayesian Equilibrium Signaling and Screening in Labor Markets Reputation in Repeated Interactions & Monetary Policy Cheap Talk, Persuasion & Debate	
T12/18<6-8pm>*	EXAM 2: covers material from the whole course	

**Final exam schedule is subject to confirmation or change by the University Registrar's official announcement later in the semester.*
